TITLE : SURGE ABSORBING ELEMENT

ABSTRACT : PROBLEM TO BE SOLVED: To provide a surge absorbing element having a simple structure, capable of easily coping with size reduction and SMD, capable of reducing a variation in discharge starting voltage and having small capacitance.

SOLUTION: In a surge absorbing element, a pair of mutually electrically insulated internal electrodes 3 having at least a part oppositely superimposed in parallel through an insulating layer 5 on the inside of insulating ceramics composed of an insulator layers 1 having respectively external electrodes 2 on the mutually opposed two surfaces are respectively electrically continued with one external electrode 2, and electrically insulated void layers 4 are formed between the internal electrodes 3 and the other one external electrode 2.
